This invention describes the isolation of novel numan cappase recruitment domain, CARD-3 and CARD-4 polynuclectides and proteins and a partial murine CARD-1 protein and genes. The genes and proteins of the invention care involved in the regulation of caspase activation. The caspase recruitment domain (CARD) polynuclectides, polypeptides, homologues and recruitment domain (CARD) polynuclectic methods of treatment. The medicine and therapeutic and prophylactic methods of treatment. The medicine and therapeutic and prophylactic methods of treatment. The caspase certivity of the prophylactic methods may be used to diagnose and treat patients which are suffering from a disorder associated with abnormal level or rate of apoptotic cell death, abnormal activity of the Fas/APO-1 receptor complex, abnormal activity of the TMF receptor complex, or abnormal activity of a caspase. Complex associated with mutations in p53 and hormone-ceptor complex, associated with mutations in p53 and hormone-ceptor complex, immune-mediated glomerulonephritis), viral infections, capthemer's disease, parkinson's disease, amyorcophic lateral sclerosis, retinitis pigmentosa, spinal muscular dystrophy, cerebellar degeneration, anaemia, myelodysplastic syndrome, myocardial infarction, and stroke. CARD-3 protein interacts with other cellular proteins, and so can be used for requiration of cellular proliferation and differentiation and cell curvival. The CARD proteins may also be used to for screen drugs or compounds which modulate their activity. The CARD-4 gene can express a long transcript that encodes CARD-4S or two CARD-4 spince variants, a short transcript that encodes CARD-4S or two CARD-4 spince variants, as short transcript that encodes CARD-4S or two CARD-4 spince variants, as short transcript that encodes CARD-4S or two CARD-4 spince variants, as short transcript that encodes CARD-4S and second publications and cellular proteins as about the method of the
                                                                                                                                                                              invention describes the isolation of novel human caspase recruitment
regulation of cellular proliferation and differentiation and cell

```
The present sequence is that of human caspase recruitment domain 3 (CARD-3), an intracellular protein predicted to be involved in regulating caspase activation. The sequence is predicted from an isolated CDNA clone (see AAF30001). Methods of diagnoshing and treating patients suffering from a disorder associated with an abnormal level or rate of apoptotic cell death, abnormal activity of the Fas/APO-1 receptor complex, abnormal activity of the twoorn necrosis factor receptor complex or abnormal activity of a caspase involve administering a compound that modulates the expression or activity of CARD-3, CARD-4, CARD-5 or CARD-6 e.g. using gene therapy methods. Such disorders include cancer, viral infection, autoimmune disorders, neurological diseases, haematological disorders, inflammatory disorders and immune disorders. CARD-3, CARD-4, CARD-3, CARD-4, CARD-5 or CARD-6 and 6 proteins can be used to regulate cell prodiferation, cell survival and cell growth. They can also be used to screen drugs or compounds that coll growth. They can also be used to screen drugs or compounds that modulate their activity or expression and to treat disorders associated with insufficient or excessive production of CARD-3, -4, -5 or -6 protein, or production of an aberrant protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   isolated intracellular proteins predicted to be involved in regulating cappase activation are used for diagnosis and treatment of e.g. cancer, viral infections, autoimmune diseases, neurological diseases and hematological disorders.

purypeptide with a by councating the peak compound and determining the effect of the test compound on the activity of the determining the effect of the test compound which binds to the LRR polypeptide to identify a compound which binds to the LRR (leucine rich repeat) domain of CARD-4. Also included is a method of calcine rich repeat) domain of CARD-4. Also included is a method of dentifying a candidate compound for modulating LPS (lipopolysaccharide).

CC identifying a candidate compound for modulating LPS (lipopolysaccharide) and cell expressing a polypeptide comprising the LRR domain of CARD-4 and contraction, where altered NF-kB activation polypeptide in the presence of the test compound compared to the binding in the absence of the test compound indicates that the test compound is a candidate compound for modulating LPS-mediated activation of NF-kB. Modulators identified by (MI) are useful for treating a disorder characterised by aberrant CARD-4 creating LPS-mediated activation of NF-kB. Modulators identified by confliction, an uncleic acid. Compounds that modulate the activity of CARD-4 care useful to treat or diagnose disorders such as cancer, viral care useful to treat or diagnose disorders such as cancer, viral care useful to treat or diagnose disorders such as cancer, viral care useful activations, Hashimoto's thyroiditis, atopic conditions such as multiple sclerosis, Hashimoto's thyroiditis, atopic conditions such as largies, insulin-dependent diabetes, bacterial infections, including tuberculosis, and lepromatous leprosy, disorders of cell signalling and disorders of cell signalling and classifier and represents human CARD-3 archerial inceptions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              532
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            472

Isolated Caspase Recruitment Domain (CARD) polypeptides (CARD-4L and CARD-4S) useful for diagnosing and treating e.g. Parkinson's and Alzheimer's disease, cancers and viral infections.

Example 2; Fig 2; 116pp; English.

The invention relates to novel isolated Caspase Recruitment Domain (CARD) polypeptides, CARD-41 and CARD-45. The CARD proteins of the invention may be used to treat disorders associated with decreased CARD expression by supplementing the patient's own production of CARD. Disorders associated with the expression and activity of CARD include Cancers (particularly follicular lymphomas, carcinomas associated with mutations in p53, and covarian cancer), autoimmune disorders (such as systemic lupus erythematosus, immune-mediated glomerulonephritis), viral infections erythematosus, immune-mediated glomerulonephritis), viral infections or such as there is an adenoviruses, neurological diseases (such as Alzeimer's disease, Parkinson's disease, amylotrophic lateral sclerosis (ALS) retinitis pigmentosa, spinal muscular atrophy, and various forms of cerebellar degeneration), annemia associated with chronic disease, aplastic anaemia, chronic neutropenia, and the myelodysplastic syndromes. This sequence represents a human CARD protein relating to the invention

AAZ46138-Z46168 encode human phosphorylation effectors (PHSP), designated PHSP1-PHSP3. (the protein sequence for PHSP2 is not given in the specification). The sequences were isolated from cDNA libraries prepared from various human tissues. The PHSP proteins are useful for the diagnosis, treatment and prevention of proliferative disorders, immune disorders and neuronal disorders. The PHSP proteins form pharmaceutical compositions which useful for treating or preventing disorders associated with decreased PHSP expression/activity. PHSP antagonists are useful for treating or preventing disorders associated with increased PHSP

```
synthesizing full length cDNA clones and their use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated be and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length human cDNA of the thin the printed specification, but was obtained in CD-ROM format directly from BPO.
                                                                                                                                                                                                                                                                                        Ħ
                                                                                                                                                                                                                                                       Kawai Y;

Cells can be modulated or mediated in inflammation, cell death or cell survival pathways or another intracellular signalling activity using B1. Conditions such as AIDS and cancer can be treated using B1. Antibodies, oligonucleotides and ribozymes can also be used to regulate the above

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to antisense compounds targetted to a nucleic acid encoding human receptor interacting protein (RIP)2 to inhibit its expression. Antisense compounds are used for treating diseases associated with RIP2 expression. They are also useful in antisense gene therapy. The present sequence is human RIP2 DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New antisense oligonucleotide that targets regions of a nucleic acid encoding human receptor interacting protein (RIP)2, for treating diseases associated with RIP2 expression.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a new method for identifying compounds for treating and/or preventing cytomegalovirus (CMV) infection and/or related diseases. The method of the invention comprises contacting a test compound with at least one of the cillular kinases RICK, RIP, Nck-Interacting kinase, MKK3 and SRPK-2 and detecting any change in kinase activity. The method of the invention can be used to treat and/or prevent CMV infections and related diseases. Oligonucleotides that can detect the specified kinases can also be used for diagnosis of infection. The present nucleic acid sequence encodes the human cellular kinase RICK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1224 AACATACCTGTAAATCATGGTCCACAAGAGAATCATGTGGATCCTCTCAGCTCCATGAA 1283

This sequence encodes the numan kick (kir-like interacting Liker kinase), protein of the invention. The RICK protein acts as a positive regulator of apoptosis, potentiating apoptosis induced by caspase-8 and caspase-10 adving CDS signalling. The invention provides methods for identifying apoptosis signalling pathway inhibitors and activators, and methods and compositions for screening compounds which will modulate the interactions of the various compositions identified; RKC, RKCK, and the CIDE family of activators (CIDE-A, CIDE-B and DRED-I). RICK is useful in screening assays for agents, useful in the diagnosis, prognosis or treatment of disease associated with excess cell growth and dysregulation of cappotosis. Complexes containing RICK and CLARP can be used in drug screening assays to identify inhibitor molecules blocking CD95-mediated apoptosis. Overexpression of ARC in an in vitro cell system can be used to identify inhibitors of the enzymatic activity of caspase-8.

Closing assays to identify inhibitory compounds may be useful for gene thrapy treatment of disease with increased cell death in muscle tissue and cardiac disorders. Therapeutic compositions of CIDEs can be used to treat e.g. cancer, AIDS, meurodegenerative disorders, aplastic anaemia, is chaemic injury, and toxin-induced liver disease. AntiRICK antibodies can be used as reagents for the preparation or affinity chromatography media, and for diagnostically measuring RICK levels. A specific inhibitor can be used as reagents for the preparation or affinity chromatography can be used as reagents for the preparation or affinity chromatography can be used as reagents for the preparation or affinity chromatography can be used as reagents for the preparation or affinity chromatography can be used as reagents for the preparation or affinity chromatography continuated liver disease. All can be used as reagents of an essential for apoptosis, and for diagnosic and can be used as reagents of an essential for apoptosis and can be used as recopration with int

AAC77607 to AAC78448 encode the human cancer associated proteins given in ABB4338 to AAB4439. The proteins can have activities based on the tissues and cells the genes are expressed in. Example of activities and cells the genes are expressed in. Example of activities include: cytostatic; proliferative; vulnerary; immunomodulator; antidabetic; antiasthmatic; antitalerary; immunomodulator; antidabetic; antipsordective; cardiant; thrombolytic; coagulant; dermatological; neuroprotective; cardiant; thrombolytic; coagulant; coortropic; vasotropic; antipsoriatic and antidangogenic. The polymucleotides and polypeptides can be used for preventing, treating or ameliorating medical conditions and diagnosing pathological conditions. Colymucleotides, polypeptides, antibodies, agonists and antagonists from the present invention may be used to treat immune dissorders by activating or inhibiting the proliferation, differentiation or mobilisation of immune cells, to treat disorders of haematopoietic cells, autoimmune rejection, modulate haemostatic or thrombolytic activity, modulate haemostatic or thrombolytic activity, modulate inflammation, cancers, cardiovascular disorders, neurological disease and bacterial or viral inflections. The peptides, mucleotides, and antagonists may be also be used in the exemplification of the content of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1325

The invention relates to a novel isolated polypeptide which is a human kinase and phosphatase (KPP). The KPP polypeptides, polynucleotides, pagonists and antagonists are useful for diagnosing, treating or preventing cell proliferative disorders such as atherosclerosis, cirrhosis, hepatitis and cancer, developmental disorders e.g. mental Parkinson's disease, autoimmune and inflammatory disorders such as crohn's disease and diabetes mellitus and finally, viral, bacterial, fungal, parasitic, protozoan or helminchic infections. Furthermore, the polynucleotides encoding KPP may be useful for creating transgenic animals to model human disease, as well as during gene therapy procedures. The current sequence is that of the human KPP cDNA of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1220 CTGCCAGCTCCTCAAGACAATGATTTTTTTTTTTTTGTAGAAAGCTCAAGACTGTTATTTTATG

WPI; 2003-147109/14. P-PSDB; ABU56269 Novel isolated human caspase recruitment domain (CARD)-4Y or CARD-4Z polypeptide, or murine CARD-4L polypeptide, useful in screening assays, detection assays, predictive medicine, and in therapeutic applications.

Disclosure; Col 71-74; 99pp; English

The invention relates to an isolated polypeptide, comprising at least 25 contiguous amino acids of a human caspase recruitment domain (CARD)-4Y, human CARD-4Z or murine CARD-4L (all splice variants of CARD)-4, polypeptide. Also included is an isolated fusion protein, comprising the CARD polypeptide is useful in screening assays, polypeptide covalently linked by a peptide bond to a heterologous polypeptide covalently linked by a peptide bond to a heterologous polypeptide covalently linked by a peptide bond to a heterologous polypeptide covalently linked by a peptide bond to a heterologous polypeptide is useful in screening assays, confocution assays (e.g. chromosomal mapping, tissue typing and forensic biology), predictive medicine (e.g. diagnostic assays, prognostic assays, conforing clinical trials and pharmacogenomics), and in therapeutic and corphylactic treatments (in diseases essociated with apoptotic cell death e.g. cancers autoimmune disorders (e.g. systemic lupus erythematosus and immunodeficiency syndrome), neurological disease (e.g. Alzheimer's disease, parkinson's disease, amyotrophic lateral sclerosis, retinitis pigmentosa, spinal muscular atrophy and cerebellar degeneration), haematological diseases (e.g. anaemia, neutropaemia and myelodysplastic syndromes), myocardial infarction and stroke). The CARD polypeptide is useful as bait protein in a two-hybrid assay or three hybrid assay to identify other proteins, which bind to or interact with other CARD proteins. Also disclosed are CARD-3 proteins and cDNAS. The gene for human CARD-4 is located on chromosome 7. The present sequence is a human CDNA CARD

                                                                                                                                                                                                          ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention describes the isolation of novel human caspase recruitment domain, CARD-1 protein and genes. The genes and proteins and a partial curine (CARD-14 protein and genes. The genes and proteins of the invention are involved in the regulation of caspase activation. The caspase cretainment domain (CARD) polynuclectides, polypeptides, homologues and antibodies can be used in screening assays, detection assays, predictive medicine and therapeutic and prophylactic methods of treatment. The medicine and therapeutic and prophylactic methods of treatment. The captured may be used to disponse and treat patients which are suffering from a disorder associated with abnormal level or rate of apoptotic cell death, abnormal activity of the TMF receptor complex, or abnormal activity of a caspase. Cativity of the TMF receptor complex, or abnormal activity of a caspase. Diseases that may be treated include cancer (particularly follicular lymphoma, carcinomas associated with mutations in p53 and hormone-captorent tumours), autoimmune disorders (e.g. systemic luque erythematosis, immune-mediated glomerulonephritis), viral infections, captomers in pfamentosa, sprinal muscular dystrophy, cerebellar degeneration, anaemia, myelodysplastic syndrome, myocardial infarction, and stroke.

CARD-3 protein interacts with other cellular proteins, and so can be used for regulation of cellular proliferation and differentiation and erythematosis protein modulate their activity. The CARD-4 gene can express a long transcript that encodes CARD-4s and CARD-4s and CARD-42. This sequence compounds which modulate activity. CARD-47 and CARD-42. This sequence compounds which modulate their activity. The CARD-47 and CARD-42. This sequence compounds which when modulate activity and store an express a long transcript that encodes CARD-47 and CARD-42. This sequence compounds the human CARD-4 splice variants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1153 TTACAGAGTGTTTCAAGTGCCATTCACCTATGTGACAAGAAGAAAATGGAATTATCTCTG 1212

                                                                                                                                                                                                   ð
                                                                                                                                                            The present sequence is that of cDNA encoding human caspase recruitment domain 3 (CARD-3, see AAB20079). The cDNA was isolated following a database search using known CARD sequences. Plasmid pXE17A containing CARD-3 cDNA is deposited as ATCC 20307. CARD-3 is an intracellular protein predicted to be involved in regulating caspase activation. It is useful as a modulating agent in regulating callular processes include cell growth and cell death. Methods of diagnosing and treating patients suffering from a disorder associated with an abnormal level or rate of apoptotic cell death, abnormal activity of the Fas/APO-1 receptor complex. Complex, abnormal activity of the tumour necrosis factor receptor complex or abnormal activity of the tumour necrosis factor receptor complex or abnormal activity of a caspase involve administering a compound that modulates the expression or activity of CARD-3, CARD-4, CARD-5 or CARD-6 or as small molecule, antisense nucleic acid, ribozyme or polypeptide. Such disorders include cancer, viral infection, autoimmune disorders, neurological diseases, haematological disorders, inflammatory disorders and immune disorders. CARD nucleic acids can be used to express CARD proteins in a host cell e-9. for gene therapy applications, to detect a genetic lesion and to modulate CARD activity

The method may be adapted for identifying a compound which binds to the LRR (leucine rich repeat) domain of CARD-4. Also included is a method of

dentifying a candidate compound for modulating LPS (lipopolysaccharide)-
mediated activation of nuclear factor-kappa B (NF-kB), by providing a
cell expressing a polypeptide comprising the LRR domain of CARD-4 and
charbouring LPS, exposing the cell to a test compound and measuring NF-kB
activation, where altered NF-kB activation polypeptide in the presence of
the test compound compared to the binding in the absence of the test
compound indicates that the test compound is a candidate compound for
compound indicates that the test compound is a candidate compound for
modulating LPS-mediated activation of NF-kB. Modulators identified by
(MI) are useful for treating a disorder characterised by abserrant CARD-4
c protein or nucleic acid. Compounds that modulate the activity of CARD-41
care useful to treat or diagnose disorders such as cancer, viral
cinfections, autoimmune disorders e.g. systemic lupus erythematosus,
cinmune-mediated glomerulonephritis and arthritis, immune disorders, such
as multiple sclerosis, Habilmoto's thyroiditis, atopic conditions such as
as multiple sclerosis, Habilmoto's thyroiditis, gastrointestinal
casthma, allergy, psoriasis, contact dermatitis, gastrointestinal
cuberculosis, and lepromatous leprosy, disorders of cell signalling and
characters of tissues. The present sequence is the human cDNA encoding

The invention relates to novel isolated Caspase Recruitment Domain (CARD)

CC polypeptides, CARD-4L and CARD-4S. The CARD proteins of the invention may

be used to treat disorders associated with decreased CARD expression by

cupplementing the patient's own production of CARD. Disorders associated

with the expression and activity of CARD include cancers (particularly

continuar lymphomas, carcinomas associated with mutations in p53, and

chormone-dependent tumours such as pressit cancer, prostate cancer, and

covarian cancer), autoimmune disorders (such as systemic lupus

covarian cancer), autoimmune disorders (such as systemic lupus

covarian cancer), autoimmune disorders (such as systemic lupus

covarian cancer), autoimmune as of general operations

covarian cancer), autoimmune as of general operations

covarian cancer, immune-mediated glomerulomephritis), viral infections

(such as those caused by herpes viruses, poxviruses, and adenoviruses),

convolocial diseases (such as Alzhaimer's disease, Parkinson's disease,

amylotrophic lateral sclerosis (ALS) retinitis pigmentosa, spinal

muscular atrophy, and various forms of cerebellar degeneration), anaemia

associated with chronic disease, aplastic anaemia, chronic neutropenia,

and the myelodysplastic syndromes. This polynoclebic equence

The invention relates to an isolated polypeptide, comprising at least 25 contiguous amino acids of a human caspase recruitment domain (CARD)-4Y, human CARD-4Z or murine CARD-4L (all splice variants of CARD-4) contiguous amino acids of a human caspase recruitment domain (CARD)-4Y, polypeptide. Also included is an isolated fusion protein, comprising the CARD polypeptide is useful in screening assays, colypeptide. The CARD polypeptide is useful in screening assays, detection assays (e.g. chromosomal mapping, tissue typing and forensic biology), predictive medicine (e.g. diagnostic assays, prognostic assays, contioning clinical trials and pharmacogenomics), and in therapeutic and prophylactic treatments (in diseases associated with apoptotic call death crophylactic treatments (in diseases associated with apoptotic call death crophylactic treatments disorders (e.g. systemic lupus erythematosus and immunodeficiency syndrome), neurological disease (e.g. systemic lupus erythematosus immunodeficiency syndrome), neurological disease (e.g. short in a crobhylactic syndromes), mycardial infarction and stroke). The CARD polypeptide is useful as bait protein in a two-hybrid assay or three hybrid assay to identify other proteins, which bind to or interact with other CARD proteins. Also disclosed are CARD-3 proteins and charact with other CARD characters. Annual CARD-3 proteins and characteris and characteris a human can be numan care as a human can be numan care as a human can be numan care as a human can be not caredomed in a human can be numan care as a human care as a human can be not caredomed in the numan caredomed in a human caredomed in the numan caredomed in a human caredomed in the numan caredomed in a human caredomed in the numan caredomed in the numan caredomed in the numan caredomed in the numan
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1212
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel isolated human caspase recruitment domain (CARD)-4Y or CARD-4Z polypeptide, or murine CARD-4L polypeptide, useful in screening assays, detection assays, predictive medicine, and in therapeutic applications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             LeuGlnSerValSerAlaIleHisLeuCysAspLysLysLysMetGluLeuSerLeu

This invention relates to two novel genes CARD-3 and CARD-4 (caspase recruitment domains), which are mediators of apoptosis and are useful in the identification of compounds that modulate apoptosis. Specifically, CARD-3 (also known as RIP2, RICK and CARDIAK) is known to be a mediator. CARD-3 (also known as RIP2, RICK and CARDIAK) is known to be a mediator. CARD-4 (a member of the tumour necrosis factor (TNP) family), and is believed to provide the switch for cell survival and cell death decisions mediated by this p7s neutrophin receptor. Accordingly these genes, and mediated by this p7s neutrophin receptor. Accordingly these genes, and with an increased number of cells surviving and proliferating when apoptosis is inhibited. These include cancer, autolimune disorders e.g. systemic lupus and immune mediated glomerulomephritis, viral infections such as those caused by the herpesvirus, neurological disorders such as retinitis pigmentosa, haematologic diseases including chronic neutropenia, as well as myocardial infarction and strokes. The present invention further describes a novel method for determining whether a test compound alters the binding of CARD-3 to p75, which comprises measuring the binding of a polypeptide containing the CARD domain of CARD-3 to a polypeptide compained, and determining if binding is altered. This polypeptide is the human CARD-3 cDNA sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1332
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1392
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TGGGATAGCACCATTTCTGGATCTCAAAGGGCTGCATTCTGTGATCACAAGACCAT-TCC 1451
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ATGCTCTTCAGCAATAATAAATCCACTCTCAACTGCAGGAAACTCAGAACGTCTGCAGCC 1511
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       145
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TGGTATAGCCCAGCAGTGGATCCAGAGCAAAAGGGAAGACATTGTGAACCAAATGACAGA 1571
                                      Detecting compounds which alter binding of the caspase recruitment domain (CARD) of CARD-3 polypeptide to the neurotrophin receptor p75 is useful to provide compounds for treating CARD-3 mediated disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        105

## ALIGNMENTS

Human cancer associated gene sequence SEQ ID NO:173. ВР. AAC77779 standard; cDNA; 2709 (first entry) 08-FEB-2001 AAC77779; RESULT 1 AAC77779 

Human; cancer associated gene; cancer antigen; detection; cancer; diagnosis; cytostatic; proliferative; vulnerary; immunomodulator; antidabetic; antiarthritic; antiviral; antinflammatory; antithyroid; antiallergic; antiarthritic; antiviral; dermatological; natithyroid; antiallergic; antibacterial; cardiant; dermatological; natipsoriatic; antiangiogenic; gene therapy; inflammation; immune disorder; haematopoletic cell disorder; attoimmune disorder; allergic craction; graft versus host disease; organ rejection; haemostatic; thrombolytic; cardiovascular disorder; infection; neurological disease; drug screening; ss. Homo sapiens.

08-MAR-2000; 2000WO-US005882. (HUMA-) HUMAN GENOME SCI INC. 12-MAR-1999; 99US-0124270P Rosen CA, Ruben SM; WPI; 2000-587533/55. P-PSDB; AAB43570. WO200055350-A1. 21-SEP-2000.

Novel isolated nucleic acids comprising sequences encoding peptides useful for treating or diagnosing e.g. cancer. Claim 1; Page 751-752; 2352pp; English. AAC77607 to AAC78448 encode the human cancer associated proteins given in AAB43398 to AAB4239. The proteins can have activities based on the tissues and cells the genes are expressed in. Example of activities

antianthmatic; antithycoid; antiallergic; antibacterial; antiviral;
dermatological; neuroprofective; cardian; thrombolytic; coagulant;
coerropic; vasotropic; antipsoriatic and antiangiogenic. The
polynucleotides and polypeptides can be used for preventing, treating or
ameliorating medical conditions and diagnosing pathological conditions.
Complicating medical conditions and diagnosing pathological conditions.
Complicating medical conditions and diagnosing pathological conditions.
Complicating medical conditions of the present invention may be used to treat immune disorders by activating or inhibiting the proliferation, differentiation or mobilisation of immune cells, to treat disorders of haemacopoietic cells, autoimmune disorders, allergic reactions, graft versus host disease and organ rejection, modulate haemostatic or thrombolytic activity, modulate inflammation, cancers, cardiovascular disorders, neurological disease and bacterial or viral infections. The peptides, nucleotides, antibodies, agonists and antagonists may be also be used in the exemplification of the antibodies.

PHSP11 (the protein sequence for PHSP28 is not given in the specification). The sequences were isolated from cDNA libraries prepared from various human tissues. The PHSP proteins are useful for the diagnosis, treatment and prevention of proliferative disorders, immune disorders and neuronal disorders. The PHSP proteins form pharmaceutical compositions which useful for treating or preventing disorders associated with decreased PHSP expression/activity. PHSP antagonists are useful for treating or preventing disorders associated with increased PHSP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 452

                                                                                                                                                                                                                                                   830 Primers useful for synthesizing full length cDNA clones and their use in genetic manipulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      closes. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5' and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA essily without any special methods. The present sequence is a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly

```

cellular kinase; RICK; ss.

```
Identifying agents for treatment or prevention of cytomegalovirus infection, comprises contacting test compound with cellular kinase detecting change in cellular kinase activity.
                                                                                                                                                                         /*tag= a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1461
The present invention relates to a new method for identifying compounds for treating and/or preventing cytomegalovirus (CMV) infection and/or related diseases. The method of the invention comprises contacting a test compound with at least one of the cellular kinases RICK, RIP, Noklinteracting kinase, MKK3 and SRPK-2 and detecting any change in kinase activity. The method of the invention can be used to treat and/or prevent CMV infections and related diseases. Oligonucleotides that can detect the specified kinases can also be used for diagnosis of infection. The present nucleic acid sequence encodes the human cellular kinase RICK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New antisense oligonucleotide that targets regions of a nucleic acid encoding human receptor interacting protein (RIP)2, for treating diseases associated with RIP2 expression.
                                                                                                                                          The invention relates to antisense compounds targetted to a nucleic acid encoding human receptor interacting protein (RIP)2 to inhibit its expression. Antisense compounds are used for treating diseases associated with RIP2 expression. They are also useful in antisense gene therapy. The present sequence is human RIP2 DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CTGGTATAGCCCAGCAGTGGATCCAGAGCAAAAGGGAAGAACATTGTGAACCAAATGACAG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence encodes the human RICK (RIP-like interacting CLARP kinase) protein of the invention. The RICK protein acts as a positive regulator of apoptosis, potentiating apoptosis induced by caspase-8 and caspase-10 during CD95 signalling. The invention provides methods for identifying apoptosis signalling pathway inhibitors and activators, and methods and compositions for screening compounds which will modulate the interactions of the various compositions identified. ARC, and the CIDE family of activators (CIDE-A, CIDE-B and DREP-1). RICK, and the CIDE family of activators (CIDE-A, CIDE-B and DREP-1). RICK is useful in screening assays for agents, useful in the diagnosis, prognosis or treatment of disease associated with excess cell growth and dysregulation of apoptosis. Complexes containing RICK and CLARP can be used in during acreaning assays to identify inhibitor molecules blocking CD95-mediated apoptosis. Overexpression of ARC in an in vitro cell system can be used to identify inhibitory compounds may be useful for gene therapy treatment of disease with increased cell death in muscle tissue therapy treatment of disease with increased cell death in muscle tissue
                                                   RICK; human; RIP-like interacting CLARP kinase; apoptosis regulator; ARC; caspase-10; CD95 signalling; apoptosis signalling pathway; CIDE-A; CIDE-B; DREP-1; diagnosis; cell growth; apoptosis dysregulation; gene therapy; cardiac disorder; cancer; neurodegenerative disorder; AIDS; aplastic anaemia; ischaemic injury; toxin-induced liver disease; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      and cardiac disorders. Therapeutic compositions of CIDEs can be used to treat e.g. cancer, AIDS, neurodegenerative disorders, aplastic anaemia, ischaemic injury, and toxin-induced liver disease. Antifick antibodies can be used as reagents for the preparation or affinity chromatography media, and for diagnostically measuring RICK levels. A specific inhibitor of an essential step in the biochemistry of apoptosis is needed. RICK interaction with intracellular factors such as CLARP and FADD appears to be essential for apoptosis, inhibitors of RICK binding to intracellular apoptosis factors are potential drug candidates

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a novel isolated polypeptide which is a human kinase and phosphatase (KPP). The KPP polypeptides, polynucleotides, pagonists and antagonists are useful for diagnosing, treating or preventing cell proliferative disorders such as atherosclerosis, cirrhosis, hepatitis and cancer, developmental disorders e.g. mental retardation, neurological disorders including Alzheimer's disease and Parkinson's disease, autoimmune and inflammatory disorders such as Crohn's disease and diabetes mellitus and finally, viral, bacterial, fungal, paramitic, protozoan or helminthic infections. Furthermore, the polynucleotides encoding KPP may be useful for creating transgenic animals to model human disease, as well as during gene therapy procedures. The current sequence is that of the human KPP CDNA of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1377 TATCTAGAAAAGCTCAAGACTGTTATTTTATGAAGCTGCATCACTGTCCTGGAAATCACA 1436
                                                                                                                                                                                                                                                                                  New B1 protein regulates cell death and cell survival pathways -derivatives, DNA and antibodies, also regulate intracellular inflammation ; for treating AIDS, cancer.
                                                                                                                                                                                                                                                                                                                                                                                                 This invention describes the isolation of a novel human B1 protein which can interact with, intracellular mediators or modulators of inflammation, cell death and/or cell survival pathways, directly or indirectly. Cells can be modulated or mediated in inflammation, cell death or cell survival pathways or another intracellular signalling activity using B1. Conditions such as A1DS and cancer can be treated using B1. Antibodies, oligonucleotides and ribozymes can also be used to regulate the above
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  452
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             512

cc domain, CARD-3 and CARD-4 polynuclectides and proteins and a partial murine CARD-11 protein and genes. The genes and proteins of the invention crecuitment domain (CARD) polynuclectides, polypeptides, homologues and recruitment domain (CARD) polynuclectides, polypeptides, homologues and antibodies can be used in screening assays, detection assays, predictive methods may be used to diagnose and treat patients which are suffering from a disorder associated with abnormal level or rate of apoptotic cell catch, abnormal activity of the Fas/APO-1 receptor complex, abnormal cativity of the TMF receptor complex, abnormal activity of the TMF receptor complex, abnormal activity of the TMF receptor complex, or abnormal activity of a caspase. Complex associated with mutations in p53 and hormone-cativity of the TMF receptor complex, or subnormal activity of a caspase. Complement tumours), autoinmune disorders (e.g. systemic lupus captions, immune-mediated with mutations in p53 and hormone-captinitis pigmentosa, spinal muscular dystrophy, cerebellar degeneration, angelodysplastic syndrome, myocardial infarction, and stroke. Capp. 3 protein interacts with other cellular proteins, and so can be used for requiring pigmentosa, spinal muscular dystrophy, cerebellar degeneration, angendysplastic syndrome, myocardial infarction, and stroke. Compounds which modulate their activity. The CARD-4 gene can express a long transcript that encodes CARD-41, as short transcript that encodes CARD-45 and CARD-47 and CARD-47. This sequence compounds the human CARD-4 spince variants, and the transcript that encodes captor and the method of the invention

Bertin J;

WPI; 2001-061973/07. P-PSDB; AAB20079 Isolated intracellular proteins predicted to be involved in regulating caspase activation are used for diagnosis and treatment of e.g. cancer, viral infections, autoimmune diseases, neurological diseases and hematological disorders.

Claim 1(a); Fig 1; 208pp; English.

The present sequence is that of cDNA encoding human caspase recruitment domain. 3 (CARD-3, see AAB20079). The cDNA was isolated following a database search using known CARD sequences. Plasmid pXE17A containing CARD-3 cDNA is deposited as ATCC 203037. CARD-3 is an intracellular protein predicted to be involved in regulating caspase activation. It is useful as a modulating agent in regulating cellular processes include cell growth and cell death, Methods of diagnosing and treating patients culfering from a disorder associated with an abnormal level or rate of apoptotic cell death, abnormal activity of the tumour necrosis factor receptor complex, abnormal activity of the tumour necrosis factor receptor complex. Abnormal activity of the tumour necrosis factor receptor complex as mall molecule, antisense nucleic acid, ribozyme or polypeptide. Such disorders include cancer, viral infection, autoimmune disorders. Candiamatory disorders and immune disorders. CARD mucleic acids can be used to express CARD proteins in a host cell e.g. for gene therapy applications, to detect a

The invention relates to identifying (MI) a compound which modulates a human or murine caspase recruitement domain (CARD) 4D (long form) human or murine caspase recruitement domain (CARD) 4D (long form) polypeptide with a test compound and determining the effect of the test compound on the activity of the polypeptide to identify a compound which modulates the polypeptide. The method may be adapted for identifying a compound which binds to the LRR (leucine rich repeat) domain of CARD-4. Also included is a method of identifying a candidate compound for modulating LPS (lipopolygaccharide) mediated activation of nuclear factor-kappa B (NF-kB), by providing a cell expressing a polypeptide comprising the LRR domain of CARD-4 and harbouring LPS, exposing the cell to a test compound and measuring NF-kB activation, where altered NF-kB activation polypeptide in the presence of the test compound compared to the binding in the absence of the test compound indicates that the test compound is a candidate compound for modulating LPS-mediated activation of NF-kB. Modulators identified by (MI) are useful for treating a disorder characterised by aberrant CARD-4. Expression of the test of the test of the compounds that modulate the activity of CARD-4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1210

```
The invention relates to novel isolated Caspase Recruitment Domain (CARD) polypeptides, CARD-4L and CARD-4S. The CARD proteins of the invention may be used to treat disorders associated with decreased CARD expression by supplementing the patient's own production of CARD. Disorders associated with the expression and activity of CARD include cancers (particularly folloular lymphomas, carcinomas associated with mutations in p53, and hormone-dependent tumours such as brossic cancer, prostate cancer, and ovarian cancer), autoimmune-mediated glomerulonephritis), viral infections erythematosus, immune-mediated glomerulonephritis), viral infections cutch as those caused by herspes viruses, poxylruses, and ademoviruses), neurological diseases (such as Alzheimer's disease, Parkinson's disease, amylotrophic lateral sclerosis (ALS) retinitis pigmentosa, spinal muscular atrophy, and various forms of cerebellar degeneration), anaemia associated with chronic disease, aplastic anaemia, chronic neutropenia, and the myelodysplastic syndromes. This polynucleotide sequence represents the CDNA of a human CARD relating to the invention
                                                                                                                                                                                                                              Isolated Caspase Recruitment Domain (CARD) polypeptides (CARD-4L and CARD-4S) useful for diagnosing and treating e.g. Parkinson's and Alzheimer's disease, cancers and vixal infections.
                                                                                                                                                                                                N-PSDB; AAO22107, AAO22108, AAO22109, AAO22110.

Also included is an isolated fusion protein, comprising the CARD polypeptide covalently linked by a peptide bond to a heterologous polypeptide. The CARD polypeptide is useful in screening assays,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel isolated human caspase recruitment domain (CARD)-4Y or CARD-4Z polypeptide, or murine CARD-4L polypeptide, useful in screening assays, detection assays, predictive medicine, and in therapeutic applications.

biology), predictive medicine (e.g. diagnostic assays, prognostic assays, biology), predictive medicine (e.g. diagnostic assays, prophylactic treatments (in diseases associated with apoptotic cell death e.g. cancers, autoimmune diseases essociated with apoptotic cell death c.g. cancers, autoimmune diseases e.g. systemic lupus erythematosus and immuneaficiency syndrome), neurological disease (e.g. Alzheimer's clisease, Parkinson's disease, amyotrophic lateral sclerosis, retinitis pigmentosa, spinal muscular atrophy and cerebellar degeneration), c.g. haematological diseases (e.g. anaemia, neutropeania and myelodysplastic syndromes), myocardial infarction and stroke). Three hybrid assay to identify other protein in a two-hybrid assay or three hybrid assay to identify other proteins, which bind to or interact with other CARD contents. Also disclosed are CARD-3 proteins and cDNAS. The gene for human CARD-4 is located on chromosome 7. The present sequence is a human CARD cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1870

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention relates to two novel genes CARD-3 and CARD-4 (caspase recruitment domains), which are mediators of apoptosis and are useful in the identification of compounds that modulate apoptosis. Specifically, CARD-3 (also known as RTP2, RICK and CARDLAK) is known to be a mediator of p75 (a member of the tumour necrosis factor (TNF) family), and is believed to provide the switch for cell survival and cell death decisions mediated by this p75 neutrophin receptor. Accordingly these genes, and the proteins encoded thereof, are linked to certain disorders associated with an increased number of cells surviving and proliferating when a popoposis is inhibited. These include cancer, autoimmune disorders e.g. systemic lupus and immune mediated glomerulonephritis, viral infections such as those caused by the herpesvirus, neurological disorders such as those caused by the herpesvirus, neurological disorders such as retinitis pigmentosa, hemmatologic diseases including chronic neutropenia, as well as myocardial infarction and strokes. The present invention further describes a novel method for determining whether a test compound alters the binding of a polypeptide containing the CARD domain of CARD-3 to a polypeptide comparishing the death domain of p75 in the presence and a polypeptide companial, and determining if binding is altered. The invention relates to an isolated polypeptide, comprising at least 25 contiguous amino acids of a human caspase recruitment domain (CARD)-4Y, human CARD-4Z or muthine CARD-4L (all splice variants of CARD)-4Y, polypeptide. Also included is an isolated fusion protein, comprising the CARD polypeptide is useful in screening assays, polypeptide. The CARD polypeptide is useful in screening assays, detection assays (e.g. chromosomal mapping, tissue typing and forensic biology), predictive medicine (e.g. diagnostic assays, prognostic assays, monitoring clinical trials and pharmacogenomics), and in therapeutic and prophylactic treatments (in disease associated with apoptotic call death e.g. cancers, autoimmune disorders (e.g. systemic lupus erythematosus and immunodeficiency syndrome), neurological disease (e.g. Alzheimer's disease, anyotrophic lateral sclerosis, retinitis pigmentosa, spinal muscular atrophy and cereballar degeneration), haematological disease, envolupida assay or three hybrid assay to sharp protein in a two-hybrid assay or three hybrid assay to redenins, which bind to or interact with other CARD proteins, and care the proteins a human can human can buman can be considered by the present sequence is a human can buman can be considered by the present sequence is a human can be considered by the present sequence is a human can be considered by the present sequence is a human can be considered by the present sequence is a human can be considered by the present sequence is a human can be considered by the present sequence is a human can be considered by the present sequence is a human can be considered by the present sequence is a human can be considered by the present sequence is a human can be considered by the present sequence is a human can be considered by the present sequence is a human can be considered by the present sequence is a human can be considered by the present sequence is a human can be considered by the present sequence is a human can be considered by the present sequence is a human can
